

# ezRA - Easy Radio Astronomy - ezGal

- Nov-17-2022

ezRA - Easy Radio Astronomy  
<https://github.com/tedcline/ezRA>

The ezGal Galaxy explorer program is a Galaxy Crossing data plotter, which reads one or more condensed data \*Gal.npz files, creates several plot image files to study, and creates one experimental combined Galaxy Crossing data \*GalC.npz file.

Currently, no ezRA program reads the experimental combined Galaxy Crossing data \*GalC.npz files.

## **\*Gal.npz Compressed Data File**

```
np.savez_compressed(fileGalWriteName,  
    fileObsName=np.array(ezRAObsName),  
  
    fileFreqMin=np.array(fileFreqMin),  
    fileFreqMax=np.array(fileFreqMax),  
    fileFreqBinQty=np.array(fileFreqBinQty),  
  
    velGLonP180=velGLonP180,  
    velGLonP180Count=velGLonP180Count,  
    galDecP90GLonP180Count=galDecP90GLonP180Count)
```

# ezGal Plot File List

Each ezGal plot image filename starts with “ezGal”, followed by a 3-digit number, followed by a description, followed by “.png” . The first plot filename is “ezGal510velGLon.png”.

The ezGal plot files are organized into groups. The groupings allows the -ezGalPlotRangeL arguments to speed execution by creating only the related plots that are wanted.

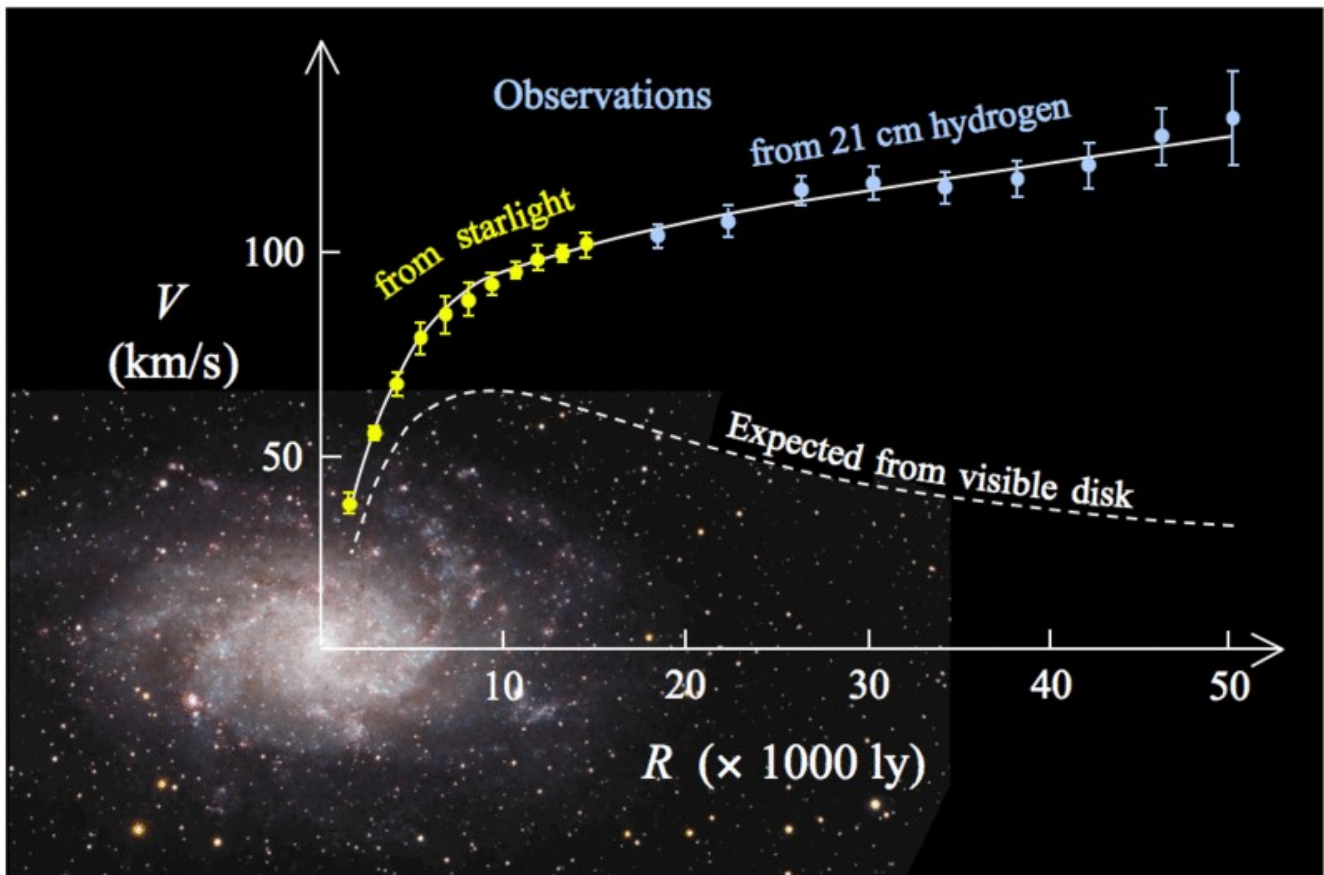

The ezGal5xx plot files are very similar to the ezCon5xx plot files.

The ezCon program reads Galactic crossing spectra from .txt data files.

The ezGal program reads Galactic crossing spectra from \*Gal.npz data files, often with more data.

The ezGal5xx plot files are various plots of Galactic plane hydrogen gas velocity information. Many ezGal590 plot files are possible, displaying processed spectra showing gas velocity Doppler effects. An ezGal511velGLonCount.txt file is a scorecard of which 1-degree Galactic Longitude Galactic plane spectra are recorded.

ezGal510velGLon.png	- corrected Galactic crossing spectra vs 1-degree GLongitude
ezGal511velGLonCount.png	- Count of Galactic crossing spectra vs 1-degree GLongitude
ezGal511velGLonCount.txt	- text Count of Galactic crossing spectra vs 1-degree GLon
ezGal520velGLonPolar.png	- Galactic crossing spectra vs Galactic Longitude, Polar
ezGal521velGLonPolarCount.png	- Count of Galactic crossing spectra vs GLongitude, Polar
ezGal530galDecGLon.png	- count of Galactic crossings, Declination vs GLongitude
ezGal540velGLonEdgesB_*.png	- ezGal510velGLon plot with min and max freq dots
ezGal541velGLonEdges_*.png	- ezGal510velGLon plot with only min and max freq dots
ezGal550galRot.png	- Galactic Rotation speed vs Galactic radius
ezGal590gLonDegP180_*ByFreqBinAvg.png	- spectrum for one Galactic crossing 1-degree GLon
