

Title: Guiradio - Radiometer
Author: Pierre ...ech (CCERA)
Copyright: GNU-GPL
Description: A sim...astronomy
Output Language: Python
Generate Options: QT GUI

Variable
ID: samp_rate
Value: 500k

Variable
ID: actual_freq
Value: 1.42041G

Variable
ID: integQty
Value: 31k

Parameter
ID: longitude
Label: Longitude
Type: Float
Value: -103.156

Variable
ID: alt
Value: 87.5

Variable
ID: amsl
Value: 1.372k

Variable
ID: decn
Value: 49.1192

Variable
ID: azimuth
Value: 0

Note:
In two blocks below,
in the boxes
"RSP Selector",
insert the following
numbers, one in each
block (these are same
as serial numbers
on back of devices):
2405079A34
2405079A34
240507AB34

SDRplay: RSPduo
RSP Selector: 2405079A34
RSPduo mode: Single Tuner
Antenna: Tuner 1.50 ohm
Sample rate (Sps): 500k
Center Freq (Hz): 1.42G
Bandwidth (Hz): AUTO

Note:
Choose the two above
to select TWO
independent RSPduo
SDRs linked by single
clock cable, each in
single channel mode
(gives greater bandwidth)

SDRplay: RSPduo
RSP Selector: 240507AB34
RSPduo mode: Single Tuner
Antenna: Tuner 2.50 ohm
Sample rate (Sps): 500k
Center Freq (Hz): 1.42G
Bandwidth (Hz): AUTO

Note:
Choose the one above
for one RSPduo SDR
in dual channel mode
(lower bandwidth but
only requires one
receiver)

Variable
ID: freqlow
Value: 1.42016k

Variable
ID: freqhigh
Value: 1.42066k

Variable
ID: freqstep
Value: 244.141u

Variable
ID: fftsize
Value: 2.048k

We make this a variable, but in reality
Embedded Python blocks
dont handle runtime vector sizing very well

Parameter
ID: freq
Label: RF Frequency (Hz)
Type: Float
Value: 1.42041G

Parameter
ID: srate
Label: Sample Rate (SPS)
Type: Float
Value: 5M

Parameter
ID: rfgain
Label: RF Gain (dB)
Type: Float
Value: 49

Parameter
ID: sinteg
Label: Integrat...or Spectrum
Type: Float
Value: 60

Variable
ID: prefix
Value: 49.12

Parameter
ID: logtime
Label: Logging ...rval (secs)
Type: Float
Value: 5

Parameter
ID: utc
Label: Log in UTC time
Type: Int
Value: 1

Parameter
ID: dmult
Label: Detector Multiplier
Type: Float
Value: 100

Variable
ID: winpower
Value: 528.051

Variable
ID: split_ratio
Value: 100

QT GUI Tab Widget
ID: Main
Num Tabs: 1
Label 0: GSR

Variable
ID: decinstr
Value: +49.12

Variable
ID: gmt
Value: time.gmtime()

Variable
ID: today
Value: 2025-10-16

Variable
ID: seconds
Value: 3.6k

Variable
ID: tiktok
Value: 0

Parameter
ID: vf
Type: Int
Value: 1

Parameter
ID: tinteg
Label: Integrat...ecs) for TP
Type: Float
Value: 60

QT GUI Label
ID: variable_qtgui_label_rf
Label: RF SDR Parameters
Default Value:

QT GUI Label
ID: variable_label_location
Label: Location Parameters
Default Value:

QT GUI Label
ID: variable_qtgui_label_0
Label: Antenna Parameters
Default Value:

QT GUI Label
ID: variable_qtgui_label_3
Label: Astronomy Parameters
Default Value:

Variable
ID: ltp
Value: time.gmtime(time.ti...

Function Probe
ID: pacer
Block ID: pacer_probe
Function Name: level
Poll Rate (Hz): 1
A bit of a hack to get us an LMST
display that is updated at 1Hz

QT GUI Entry
ID: ifreq
Label: Tuned Frequency
Default Value: 1.42041G

QT GUI Range
ID: rfgain
Label: RF Gain
Default Value: 49
Start: 0
Stop: 100
Step: 2.5

QT GUI Range
ID: longitude
Label: Longitude :
Default Value: -103.156
Start: -180
Stop: 180
Step: 100m

QT GUI Label
ID: variable_qtgui_label_1
Label: Azimut :
Default Value: 180 ...ansit)

QT GUI Range
ID: latitude
Label: Latitude :
Default Value: 87.5
Start: -90
Stop: 90
Step: 100m

QT GUI Range
ID: altitude
Label: Altitude :
Default Value: 87.5
Start: 0
Stop: 2k
Step: 100m

QT GUI Label
ID: decin
Label: Declination target :
Default Value: +49.12

QT GUI Range
ID: isinteg
Label: Spectral...ration Time
Default Value: 60
Start: 1
Stop: 300
Step: 1

QT GUI Check Box
ID: correct_baseline
Label: Baseline Correction
Default Value: False
True: True
False: False

QT GUI Check Box
ID: velocity
Label: Velocity / Frequency
Default Value: 1
Option 0: 0
Label 0: No file
Option 1: 1
Label 1: CSV file
Option 2: 2
Label 2: ezRA file

QT GUI Chooser
ID: filechoice
Label: File type choice
Num Options: 3
Default option: 0
Option 0: 100
Label 0: x100
Option 1: 1k
Label 1: x1000
Option 2: 10k
Label 2: x10000
Option 3: 100k
Label 3: x100000
Option 4: 1M
Label 4: x1000000

QT GUI Range
ID: dt_gain
Label: Detector Output Mult.
Num Options: 5
Default option: 100
Option 0: 100
Label 0: x100
Option 1: 1k
Label 1: x1000
Option 2: 10k
Label 2: x10000
Option 3: 100k
Label 3: x100000
Option 4: 1M
Label 4: x1000000

Import
Import: math

Import
Import: time

Note:
The total-power sub-graph
Compute mag~2 for both inputs
(East and West)
Provide East and West outputs
as well as sum and difference

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
Do not need serial
numbers as only
one device plugged in

Note:
Do not need serial
numbers as only
one device plugged in

Note:
Choose the one above
for one RSPduo SDR
in single channel mode

Note:
Choose the one above
for one RSPduo SDR
in dual channel mode
(lower bandwidth but
only requires one
receiver)

Note:
Choose the two above
to select TWO
independent RSPduo
SDRs linked by single
clock cable, each in
single channel mode
(gives greater bandwidth)

Note:
The "back-end" operates at this many Hz
20Hz should be more than adequate for
any data-logging requirements for this
type of observing

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.

Note:
There are 32-bit-float numerical
issues when using very-small ALPHA
values in the IIR.
So, we do the integration in two stages.
